# Decision Algorithm to Assist with Testing and Monitoring of Patients with Suspected Ebola Virus Disease (EVD)

(Updated 9/2/14 – Please note this interim guidance is subject to change.)

# Any of the following risk factors within 3 weeks (21 days) before onset of symptoms<sup>1,2</sup>:

- Contact with blood or other body fluids of a patient known to have or suspected to have EVD,
  OR
- Residence in (or travel to) an area where EVD transmission is active (Guinea, Sierra Leone, Liberia, Lagos, Nigeria, or Democratic Republic of Congo), <u>OR</u>
- Direct handling of bats, rodents, or primates or raw bushmeat from disease-endemic areas

# EVD NOT SUSPECTED -DO NOT TEST

### **HIGH-RISK EXPOSURE**

- Percutaneous, mucous membrane exposure or direct skin contact with body fluids of a person with confirmed or suspected EVD <u>OR</u>
- Laboratory processing of bodily fluids of suspected or confirmed EVD cases without appropriate personal protective equipment (PPE) or standard biosafety precautions <u>OR</u>
- Direct contact with human remains without appropriate PPE in the geographic area where an EVD outbreak is occurring

### **LOW-RISK EXPOSURE**

- Household contact of an EVD patient <u>OR</u>
- Persons with close contact<sup>1</sup>
  with EVD patients in health care
  facilities or community settings
  while not wearing appropriate
  PPE <u>OR</u>
- Persons with direct unprotected contact with bats or primates from EVD-affected countries

### **NO KNOWN EXPOSURE**

NO

 Persons who had residence in (or travel to) Guinea, Sierra Leone, Liberia, or Lagos, Nigeria, or Democratic Republic of Congo WITHOUT high- or lowrisk exposures

- FEVER ≥101.5°F (38.6°C) AND/OR
- ANY compatible symptoms: severe headache, muscle pain, vomiting, diarrhea, abdominal pain, hiccups, or unexplained hemorrhage AND
- Unknown or abnormal blood work including: lymphocytopenia <1,000 cells/µL, thrombocytopenia <150,000 cells/µL AND/OR elevated hepatic transaminases

YES

- **FEVER** ≥101.5°F (38.6°C) <u>AND</u>
- ANY compatible symptoms: severe headache, muscle pain, vomiting, diarrhea, abdominal pain, hiccups, or unexplained hemorrhage OR
- Unknown or abnormal blood work including: lymphocytopenia
   1,000 cells/µL, thrombocytopenia <150,000 cells/µL AND/OR elevated hepatic transaminases

NO

YES

# • FEVER ≥101.5°F (38.6°C) AND

- ANY compatible symptoms: severe headache, muscle pain, vomiting, diarrhea, abdominal pain, hiccups, or unexplained hemorrhage AND
- Unknown or abnormal blood work including: lymphocytopenia <1,000 cells/µL, thrombocytopenia <150,000 cells/µL AND/OR elevated hepatic transaminases

NO

AND no alternate diagnosis

# **EVD SUSPECTED - TESTING INDICATED**

NO

Immediately implement infection control measures if EVD is suspected <sup>5,6</sup>

Immediately report to your <u>County Health Department</u> or DOH Bureau of Epidemiology at 850-245-4401 to authorize testing.

# EVD NOT CURRENTLY SUSPECTED – NO TESTING<sup>2,7</sup>

YES

 High- or Low-Risk Exposures: Report to DOH to discuss the possible need for conditional release and movement restrictions<sup>6</sup>

### See back for references and additional recommendations

Close contact is defined as a) being within approximately 3 feet (1 meter) or within the room or care area for a prolonged period of time (e.g., healthcare personnel, household members) while not wearing recommended PPE (i.e., standard, droplet and contact precautions) or b) having direct brief contact (e.g., shaking hands) with an EVD case while not wearing recommended PPE. Brief interactions, such as walking by a person or moving through a hospital, do not constitute casual contact.

#### **Additional Recommendations**

# Infection control recommendations 5,6,7:

- Standard, contact & droplet precautions, including gloves, fluid-resistant gowns, eye protection, face mask with careful attention to donning and doffing of PPE followed by appropriate hand hygiene; additional PPE may be required including double gloving, disposable shoe covers and leg covers;
- Single patient room with private bathroom, door closed; restrict visitors
- Avoid aerosol-generating procedures; utilize aerosol precautions if performed
- Implement environmental infection control measures

### **Testing recommendations**

- Conduct only essential laboratory testing, and take appropriate precautions according to laboratory recommendations<sup>4</sup>
- Include malaria diagnostics in initial testing as it is the most common cause of febrile illness in persons with travel history to affected countries
- Following consultation with DOH and approval for EVD testing, collect a minimum sample volume of 4 mL of blood in *plastic* tube; <u>do not use pneumatic tube system</u> for transport<sup>4</sup>; contact DOH to determine the proper category for shipment<sup>4</sup>

## Follow-up recommendations for persons when EVD testing is not indicated.

- Self-monitor twice daily for fever and other symptoms for 21 days from last exposure
- Seek medical evaluation at first sign of illness
