## If you scored 5 or higher

You are at increased risk for having prediabetes and are at high risk for type 2 diabetes. However, only your doctor can tell for sure if you have type 2 diabetes or prediabetes, a condition in which blood sugar levels are higher than normal but not high enough yet to be diagnosed as type 2 diabetes. **Talk to your doctor to see if additional testing is needed.** 

Type 2 diabetes is more common in African Americans, Hispanics/Latinos, American Indians, Asian Americans, and Pacific Islanders.

Higher body weight increases diabetes risk for everyone. Asian Americans are at increased risk for type 2 diabetes at lower weights (about 15 pounds lower than weights in the 1 Point column).

## You can reduce your risk for type 2 diabetes

Find out how you can reverse prediabetes and prevent type 2 diabetes through a **CDC-recognized lifestyle change program** at <a href="https://www.cdc.gov/diabetes/prevention/lifestyle-program">https://www.cdc.gov/diabetes/prevention/lifestyle-program</a>.
